

FLORAL AND POLLEN MORPHOLOGY OF *POGOSTEMON STRIGOSUS* BENTH. AND *POGOSTEMON QUADRIFOLIUS* (BENTH.) F. MUELL (LAMIACEAE) - FROM ASSAM, NORTH EAST INDIA

Chayanika Bordoloi* and **G. C. Sarma**

Department of Botany, Gauhati University, Guwahati-781014, Assam, India.

Abstract

Floral and pollen morphology of *Pogostemon strigosus* and *Pogostemon quadrifolius* from Assam were studied by Light Microscope and Scanning Electron Microscope. A detailed taxonomic treatment of both the species were tabulated along with micrographs and live photographs were provided. The results of the paper furnish empirical basis for identification of both the species.

Key words : Lamiaceae, *Pogostemon strigosus*, *Pogostemon quadrifolius*, floral morphology, Pollen.

Introduction

Pogostemon Desfontaines belong to the tribe Pogostemoneae (Lamiaceae). The genus is distinguished from other genus of Lamiaceae bearing exserted stamens with moniliform hairs (Hasskarl 1842, Kuntze 1891, Press 1982, Bhatti & Ingrouille, 1997). It is one of the largest genus of the tribe Pogostemoneae. According to Bhatti and Ingrouille (1997), the highest species diversity was found in the India subcontinent. The genus is mostly distributed in the Southeast Asian countries, Northern Australia, Japan and the Korea.

Pogostemon strigosus (Benth.) and *Pogostemon quadrifolius* (Benth) F. Muell (Lamiaceae) were collected during the floristic survey of Assam. Both the species were annual herbs. The aerial parts of both the plant covered with densely pubescent hairs. The filaments of stamen are clearly hairy towards the middle called as moniliform hairs. (Benham, 1836, Hooker 1885 & Mukerjee, 1940).

Key to the species

◆ Floral characters

1a. Inflorescence single terminal spike; 4-8 cm × 5-8 mm,

Flower white..... *Pogostemon strigosus*

1b. Inflorescence branched; each branched terminated by a spike 8-12 cm×9mm,

Flower purplish..... *Pogostemon quadrifolius*

◆ Pollen characters

1a. Pollen size, P 19.8 µm × E 14.6 µm

..... *Pogostemon strigosus*.

1b. Pollen size, P 18.7 µm × E 13.9 µm

..... *Pogostemon quadrifolius*.

Materials and Methods

To work out on the present study and to bring out the taxonomic account, extensive field survey was carried out by visiting various areas of Assam. During field survey specimen was collected in their flowering stages. Spot photographs were taken. Permanent pollen slides were prepared by acetolysis method followed by procedure of Erdtman (1952) with modification of Nair (1970). In this manuscript, an attempt has been made to provide complete information on floral and pollen morphology of both the species by light microscope and scanning electron microscopy (SEM). The specimens were identified with the help of relevant literatures and herbaria. (ASSAM, CAL, GUBH, BSI, Eastern Circle, Shillong). In

determining names of taxa, effort has been made to give upto date nomenclature by consulting various states, national and international literatures and verified by online database of Plant list for Angiosperm version 1.1 www.plant.List.

Results

A detail floral morphology and pollen description of both the taxa were recorded. The floral photograph of *Pogostemon strigosa* (Benth.) and *Pogostemon quadrifolius* Benth. were shown in Plate 1. The light microscopy and scanning electron microscopy micrographs of *Pogostemon strigosa* (Benth.) Kuntze and *Pogostemon quadrifolius* Benth. were also provided.

Pogostemon strigosus Benth

Habitat: Rocky dry shady areas.

Flowering: March-September

Synonyms: *Dysophylla strigosa* Benth.

Exsiccatae: Assam, Karbi- Anglong (Baithalangso) Chayanika Bordoloi 18400, dated 03-12-2017. (GUBH).

Global distribution: INDIA (Assam, Khasia Hills, Jowai, Dawki, Jaintia hills, Nongkrem, Cherrapunji), Bangladesh, Myanmar.

Pogostemon quadrifolius (Benth.) F. Muell

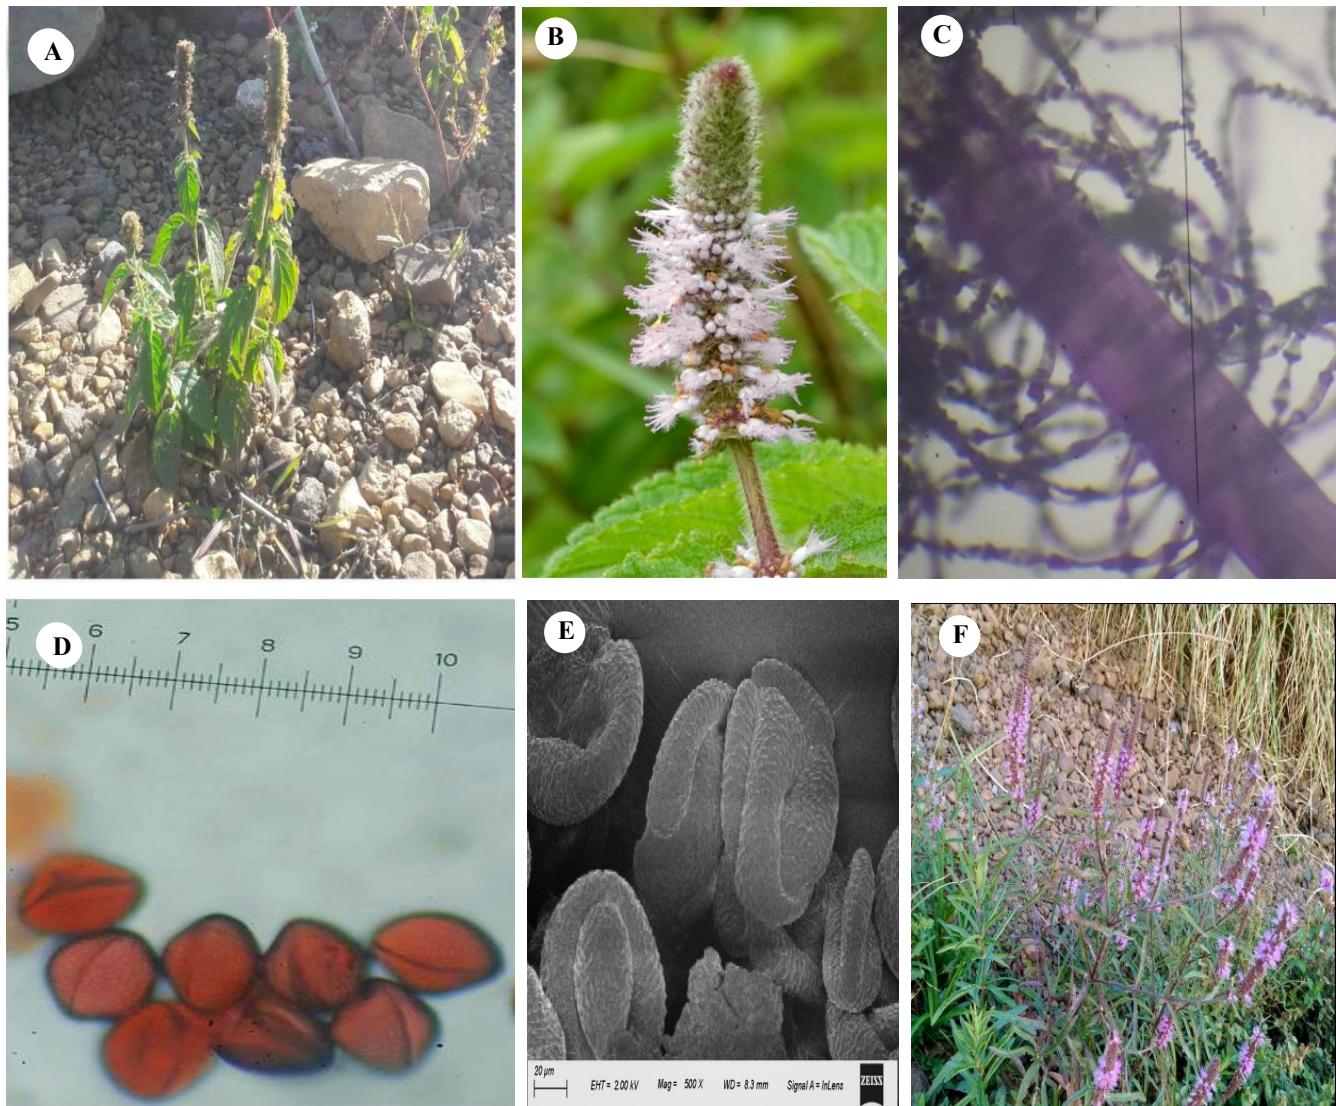

Habitat: It mostly grows near water and hilly region and edges of forests.

Flowering: From August to November.

Synonyms: *P. stellatus* (Lour) Kuntz; *Anuragia quadrifolia* (Benth.) Raizada; *Dysophylla quadrifolia*; *Dysophylla rupestris* Dalzell; *Eusteralis quadrifolia* (Benth.) Panigrahi.

Exsiccatae: Assam, Dhubri (Dhapdhepi), Chayanika Bordoloi, 12443 dated 10/09/2016 (GUBH).

Global distribution: India, (Assam, Khasi & Garo

Taxonomic treatment and Description of floral morphology

***Pogostemon strigosus* (Benth.)** in A. DC., Prodr. 12:155(1848); *Dysophylla strigosa* Benth. in Wall., Pl. asiat. rar. 1:30 (1830); Bhatti & Ingrouille. Bull. Nat. Hist. Lond. (Bot.) 27(2). 107: 1997.

Flower in verticillasters in terminal unbranched spike, Raceme simple, 4-8cm long and 5-8 mm wide, with sub sessile flower, Bracts and bracteoles clavate-linear, ciliated, 0.2-0.5 mm long. flower 1.2-1.8 cm long, calyx longer than bract, tubular, teeth 5, triangular, sub-equal, ciliated outside, 5-veined, campanulate, 1.2-1.8mm long; corolla white, 0.9 mm-2.5mm long; tube exserted, hairy outside, 4-lobed sub equal, stamen 4, filaments 0.6 mm, long, inserted at the middle of corolla tube, bearded at the middle of filaments, exerted, upper part of filaments violet in colour, middle densely covered with \pm 0.2 mm long moniliform hairs, glabrous towards tip and base; anthers rounded, broad, dark black colour; carpel \pm 0.7 mm long, violet toward tip, base white, stigma bifid, equal, lobes 0.4mm long. (Fig.1: Plate 1)

***Pogostemon quadrifolius* (Benth.) F. Muell.**, Fragm.5: 200.1866; *Eusteralis quadrifolia* (Benth.) Raizada, Suppl. Duth. Fl. Upp. Gang. Plain 218.1976; *Dysophylla quadrifolia* Benth. in Wall., Pl. Asiat. Rar. 1:30.1830; Hook. f., Fl. Brit. India. 4: 639.1885; *Dysophylla quadrifolia* Benth. Prain, Bengal Pl. 2:635, 1903; Gamble, Fl. Pres. Madras 1137 (795).1924; *Dysophylla quadrifolia* Benth. Kanjilal *et al.*, Fl. Ass. 3:513.1939; Subram., Fl. Thenmala Div. 290.1995; Bhatti & Ingrouille. Bull. Nat. Hist. Lond. (Bot.) 27(2).110:1997; *Eusteralis quadrifolia* (Benth) Panigrahi, Phytologia 32:378; Manila & Sivar., Fl. Calicut 238; Ansari, Fl. Kasaragod Div 304.198 5; Babu, Fl, Malappuram Dist 641.1991; Mohanan & Sivad., Fl. Agasthyamala 531.2002.

Annual aromatic herb, spike 8-12 mm long, compact, terminal, flowers sessile. Each branched terminated by a spike, hairy; calyx densely hairy and glandular outside, 5-teeth, 0.5-1.5mm, triangular, margin ciliated; corolla purplish, 7 mm long, glabrous inside, glandular outside, 4-lobed unequal, exserted ; stamen 4, erect, much exserted, 5 mm long, much bearded with moniliform hairs that exserted outside, 3mm, unilocular anthers; style 5mm long, stigma bifid, lobes equal. (Fig. 2: Plate 1)

Description of pollen morphology

The pollen grain of *Pogostemon strigosus* and *Pogostemon quadrifolius* were radially symmetrical and

isopolar. Apertures tricolporate. Colpi usually narrow, long and sunken, colpus membrane covered with granules or crustate elements. Exine appeared as reticulate with sculpturing, microechinate surface pattern and tectate optical section. Pollen size, P 19.8 μm \times E 14.6 μm (*Pogostemon strigosus*) and P 18.7 μm \times E 13.9 μm (*Pogostemon quadrifolius*). Shape in equatorial view prolate and polar view concave to triangular. (Plate1)

Discussion

Pogostemon strigosus and *Pogostemon quadrifolius* were newly recorded species for the flora of Assam. Both the species were not reported earlier in the *Flora of Assam* (Kanjilal *et al.*, 1939). Detailed study of both the species were not worked out till date in Assam. However, both the species were reported from Khasi & Garo hills, Jowai, Dawki, Jaintia hills, Nongkrem, Cherrapunji from North East India (Mao *et.al.*). The pollen attributes were potentially useful for both species identification and phylogenetic implication (Abdel Khalik, 2016) ‘Morphologically pollen grain are among the most conservative and constant structures and features of the spore coat that provide a tool for identification of genus or even species’ (Harris, 1955).
